

Inventory Management *Software*

Inventory management impacts every warehouse and distribution environment by presenting new challenges and requiring leading edge technology to remain competitive. Datex FootPrint® IMS real-time inventory control is a powerful tool that can keep your company in compliance with the latest industry standards. Real-time inventory control yields informed management decisions needed for increased efficiency and productivity.

“ We no longer have to keep extra stock on hand with Datex Corporation’s real-time inventory management system. ”

-Ken Marshall, BASF

Basic Inventory Modules

- ✓ Inventory Control
- ✓ Item/Location Bar-Coding
- ✓ Real Time Adjustments
- ✓ Receiving
- ✓ Detailed Inventory Reporting
- ✓ Replenishment
- ✓ Cycle Counting

Basic Inventory Attributes Supported

- ✓ SKU
- ✓ Quantity
- ✓ Location
- ✓ Hold and Activity Status
- ✓ Pallet Tracking

Realize your potential with FootPrint® IMS

Inventory Reduction:

With real-time data collection, inventory accuracy will be dramatically improved eliminating “buffer” stock and providing improved use of space through reduced inventories. Real-time bar-coded data collection will produce inventory accuracy to levels of 99.99%. Errors in writing, reading, and keying will be reduced, eliminating the need for taking physical inventory. Real-time information processing of materials/goods received eliminates the possibility of unrecognized or batch delayed data information, thus reducing float dollars.

Reduced Key Punch and Verification Process DI Capabilities:

The transition to electronic data eliminates forms and paperwork procedures. Real-Time receiving phases out paperwork for data transfer, erasing the need for manual filling systems.

Improved Picking Productivity:

The addition of RF terminals and barcode labels will direct drivers to exact locations discarding the need to spend 50% of the time searching for product. Eliminate “dead heading” and backtracking by using sequence location picking procedures.

Maintenance Cost Reduction:

Improved scheduling, routing and dispatching of lift trucks are achieved with RF terminals, reducing lift truck operating costs.

Receiving Productivity:

RF terminals and clients provide instant access to open PO's or other records providing real-time information.

Implementation:

Datex professionals provide a variety of services for successful implementation. With detailed requirements, definition processes, logistic analysis, solution designs, testing phases, and implementation, we ensure a smooth transition with minimal system interruptions and a quick return on investment.
