

Procurement Module *Software*

Effective Project Delivery requires a complex mixture of continual accountability, proper resource procurement, allocation and management and a skillful management of information, costs and processes to achieve the desired project objectives and ensure an optimal return on a client's investment. Utilizing a software solution that provides centralized real time information visibility and detailed tracking of inventory and the approval process is critical. The right tools make all the difference...

Our system is easy to use, powerful in functionality.

Recently Enhanced with a new sophisticated procurement module to meet the needs of professionals working in the EPCM mode (Engineering, Procurement, Construction Management), Datex FootPrint® WMS has increased functionality, providing a suite of robust new tools to ensure project delivery success. Using a combination of procurement and warehouse management software tools creates a comprehensive solution, from project inception through deployment to delivery.

Some New Features:

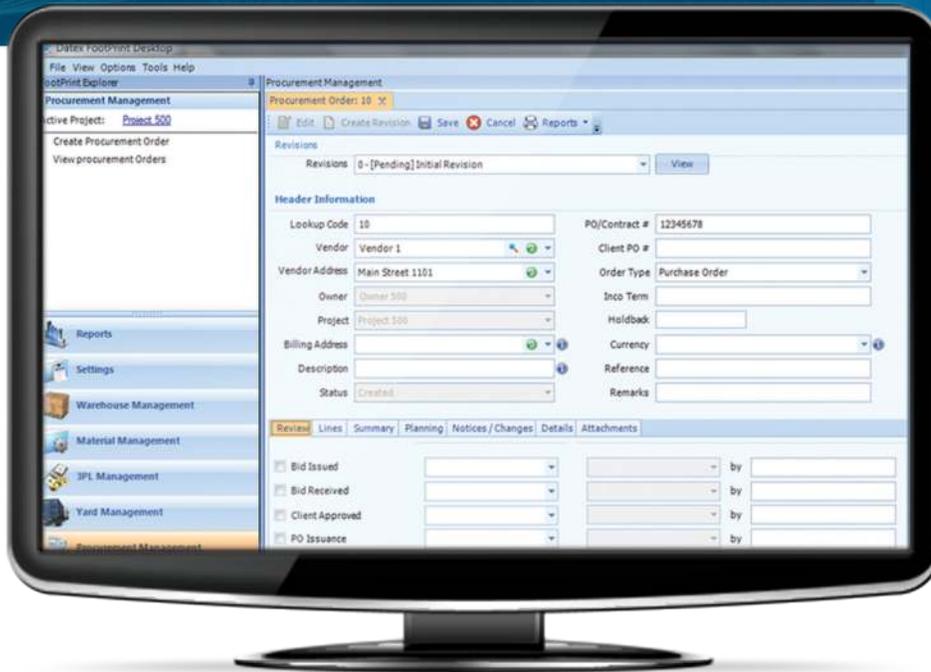

- ✔ Manage specialized equipment and bulk material purchases
- ✔ Manage and monitor the storage and transportation logistics of project equipment and materials, from fabrication to project site
- ✔ Execute bid and vendor analysis
- ✔ Manage and record details by serial number for project equipment and materials
- ✔ Create and monitor construction cost planning and control
- ✔ Administer and manage construction contracts and amendments
- ✔ Assign and manage critical project resources
- ✔ Develop project estimates and establish budget controls
- ✔ Design customizable forms using drag and drop functionality
- ✔ Create customized reports to meet a range of needs
- ✔ Utilize project schedule planning for primary delivery activities
- ✔ Manage pre-award and post-award contracting activities
- ✔ Ensure proper resource allocation with real time information visibility via a web portal
- ✔ Monitor approval process, revisions and purchase orders to ensure proper cost control

Includes Standard Procurement System Functionality:

- ✔ Review process
- ✔ Revision control
- ✔ Planning on-site or warehouse
- ✔ Contract and purchase management
- ✔ Labor control
- ✔ Multi-currency
- ✔ Multi-project

Procurement Flexibility with FootPrint®:

- ✔ Full integration into your current business solutions
- ✔ Runs on Windows platforms
- ✔ Developed using state-of-the-art Microsoft .NET technology
- ✔ Supports SQL Server databases
- ✔ Available as Server/Client or Server/Client/Web Client
- ✔ Available for desktop and handheld device capabilities
- ✔ Provides real time information
- ✔ Includes active directory control

- ✓ Lot and Serial # Control
- ✓ Multiple Stock Rotations
- ✓ Cycle Counting
- ✓ Load Building
- ✓ Location Management

Shipping

- ✓ Carrier Assignment
- ✓ Shipment Confirmation
- ✓ Bill of Lading
- ✓ Email Notification

Increase Customer Service with Datex FootPrint® WMS

Companies can no longer afford to manage purchasing, logistics and sales as separate functions or try to optimize each individually. By allowing a real-time interface between these functions and the warehouse, you are enabled with the ability to forecast more accurately, shorten sales cycles, lower on hand inventory, and provide better service to your customers. Datex provides fully integrated solutions to FootPrint® WMS as well as interfacing with 3rd party software solutions already in use by your company.

ERP Intergration

Datex FootPrint® WMS can integrate completely with most ERP and Accounting Systems on the market including Great Plains, ACCPAC, SAP, Quickbooks, MAS 500, Peachtree, Intelisys, and many others. This integration allows your company to have the warehouse and accounting in sync with real-time information.

Transportation Management System

The Transportation Management System allows your company to manage drivers, assign routes, and view realtime shipping and tracking information. When combined with FootPrint® WMS, your company will have the latest information on your inventory, inside and outside of the warehouse.

Executive Dashboard

The Executive Dashboard provides managers with key performance indicators in order to supply an overview of the health of the company and what areas are not performing up to standards. The information is pulled from the WMS and is tracked in real-time.

EDI Capabilities

FootPrint® WMS has the capability of providing EDI files to transfer information with other companies, retailers or suppliers. Many of the major retailers require the use of EDI for their transactions, making it a "must" for many companies dealing with retailers like Wal-Mart, Target, JC Penney and others.

Centralized Purchasing System

The Centralized Purchasing System provides a robust tool for procurement management. The system integrates with the WMS, providing real-time information into your inventory to help accurately manage and control the entire ordering and supply chain process.

Customer e-Portal

The customer e-Portal is a powerful tool designed to increase visibility into your inventory as well as provide an improved service to your customers. This tool will allow your customers to see their inventory levels, create orders, view reports, and complete many other functions required by your business.

Yard Management System

The Yard Management System provides increased visibility outside the four walls of your warehouse by allowing you to see the inventory available in containers and trucks within the yard as well as assisting with the scheduling of dock doors, all in real-time.

This Datex Procurement module is provided as part of FootPrint WMS, rather than as a stand alone system.
