

Give Your Business *the Edge*

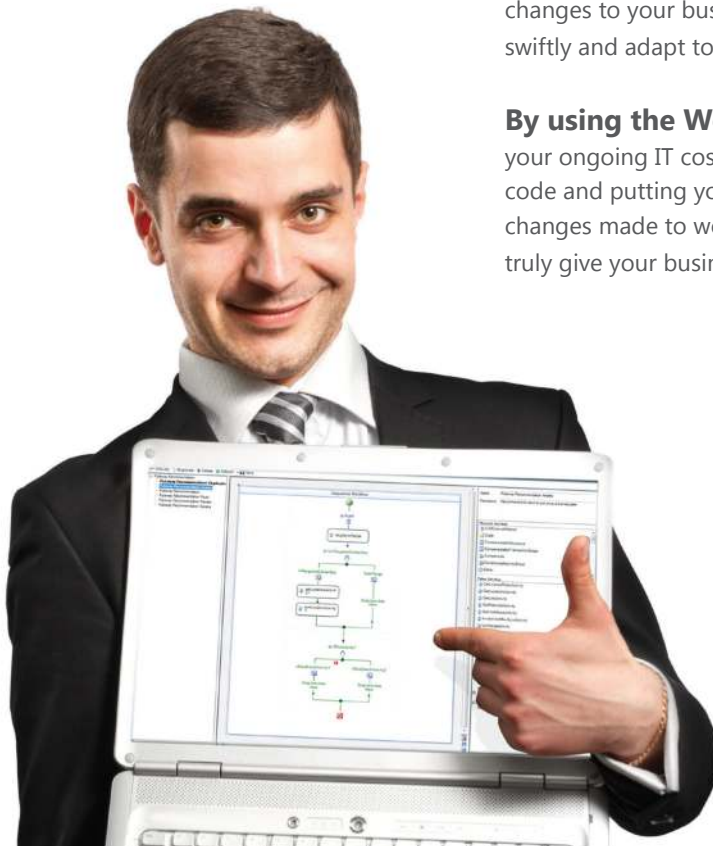

with Microsoft Windows Workflow Foundation

Datex FootPrint® WMS was developed with Microsoft tools that your IT staff can learn in order to make system configurations, adapting processes to meet changing business needs. Our warehouse management system (WMS) uses Microsoft Windows Workflow Foundation, enabling changes in your business processes without costly professional fees or hard code programming changes.

Datex WMS Workflow Designer Allows Configuration by our Clients:

Within Datex FootPrint WMS is a powerful workflow engine that powers business processes throughout the warehouse operation. The "workflow" is a set of activities which, when joined together form a process. Our warehouse management system was developed using workflows rather than static hard coding to make business processes easier and faster to change. The Datex team can train your IT staff to use the Workflow Designer within Datex FootPrint WMS. This will allow your staff to make changes to your business processes immediately. Your company will be able to react swiftly and adapt to changing business conditions and customers' requests and needs.

By using the Workflow Designer, your staff will be able to save time and reduce your ongoing IT cost, reducing professional service hours and costly changes to source code and putting your staff in command of your WMS and business processes. The changes made to workflows will carry forward to all future upgrades. That flexibility will truly give your business an edge in today's tough competitive business climate.

Microsoft®
GOLD CERTIFIED
Partner

Datex FootPrint WMS

- ✓ Your IT staff can be trained to make changes to business processes in our warehouse management system using built in Workflow Designer tool without assistance from Datex
- ✓ Workflow changes carry through to latest upgrades
- ✓ Upgrades are included with paid software support and maintenance agreement
- ✓ Datex utilizes Microsoft Windows Workflow Foundation to create a system with business processes that can be changed, rather than a hard coded system that is costly to configure and change

Other WMS

- ✗ Hard coded systems are inflexible and expensive to configure and customize
- ✗ Source code modifications have to be done by the software developer
- ✗ Upgrades are costly and time consuming

Features and Functionality:

Easy to learn and configure, Workflow Designer will enable your IT staff to make changes to business processes

Flexible, configurable series of activities based upon conditional rules you create

Ideal for third party logistics (3PL) providers, it allows you to create separate workflows to meet specific customer needs

Benefits:

- ✓ Provides your company with the ability to make changes quickly
- ✓ Your IT staff can be trained to make changes, saving additional professional fees
- ✓ Creates the ability for your operation to provide a higher level of service and adapt to dynamic business conditions

Who will this benefit?

All sized warehouse operations, distribution centers, manufacturers, third party logistics (3PL) providers, including those with multiple warehouse locations and virtual warehouses.

Even if your company does not have an IT department, changes to workflows can be made quickly by a Datex professional, decreasing typical professional service costs over those entailed with programming changes.

Within your organization, having a configurable workflow can have a positive impact on the roles filled by your team members in finance, operations, sales, management and other departments.
